

THINK LEARN WIN.

Can you tackle one of the biggest problems
facing the UK's water supply?

Help [South West Water](#) develop a tool to analyse water use, forecast consumption and predict demand. Think BIG data, spatial analytics and predictive modelling.

Does **location** matter?
What about **garden** size?
Do all **demographics** use
water in the same way?

Find out more at our competition launch event on the **13th November** at the University of Exeter or join remotely at Bath, Bristol or Cardiff University.

To sign up or find out more contact a.schofield@gw4.ac.uk

or search for [South West Water](#) at [eventbrite](#)
